

# TOWING CAPABILITY

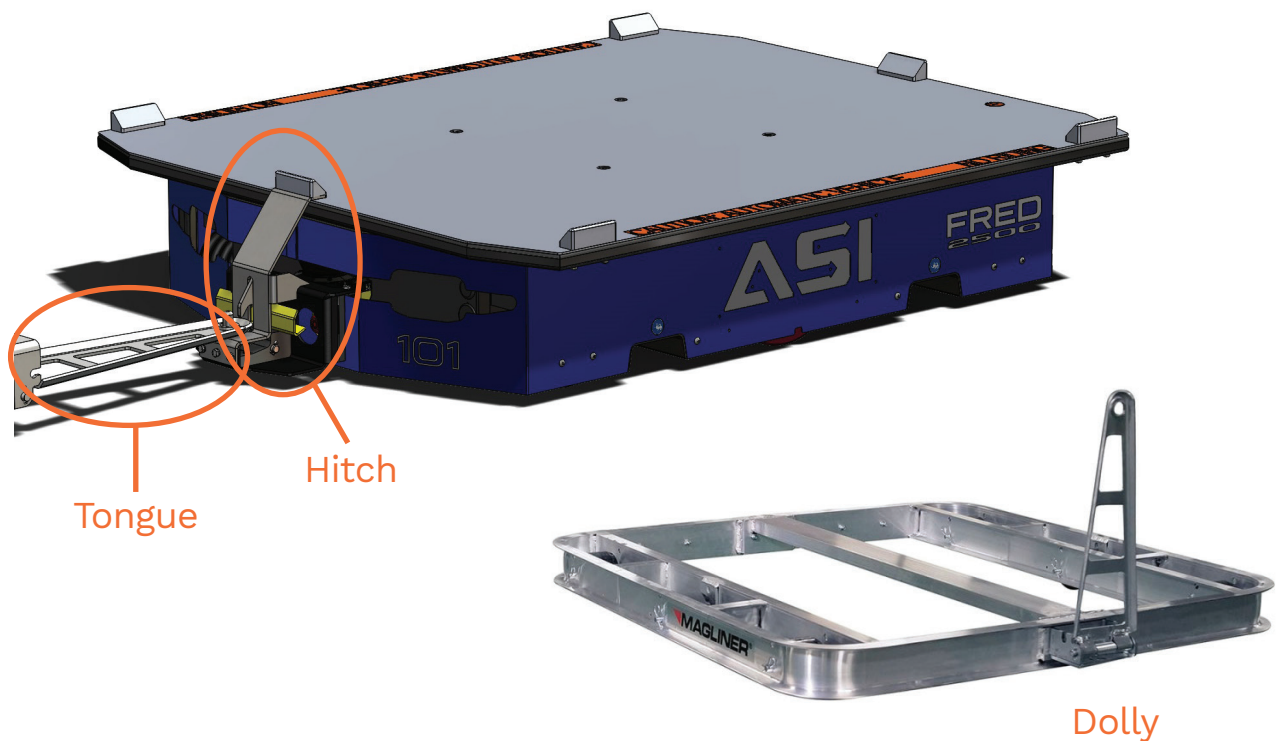

## FRED2500 OPTION

### PURPOSE

The Towing option allows FRED to tow loads greater than 2,500Lbs, depending on Dolly capacity. This option also enables the quick removal of loads from FRED without waiting for an available forklift.

### WHAT'S INCLUDED

The towing option uses a spring energized hitch to hold the dolly tongue to the hitch on FRED. Dollies are available in various sizes.

### OPERATION

To release the dolly simply press either side of the release bar toward FRED. This may be done with your foot but take care not to stand or press down on the release bar. Be sure to use the proper size dolly for your skid size. The safety laser on FRED is re-programmed for safe towing.
